

Dear FCC

I would like to register my support for RM-10352.

I have operated on the 160 meter amateur band, since first being licensed at age 11, for over 40 years.

I feel this proposed Rulemaking will provide mode segmentation that is needed to guarantee a designated area for weak signal communications, experimentation, and improvement of the Narrowband modes for the future.

Secondly, adoption of RM-10352, would guarantee compliance with the ARRL Band Plan. This action should eliminate the need for any enforcement activity related to mode segmentation on the 160 meter band.

Sincerely,
John B. Vickers WA4TT
